

Smart Property Management

Since 1995, Archidata offers a web solution for real estate managers. The plans archived on the Archidata platform are leveraged by extracting the information needed for space management and making it accessible rapidly and securely.

Reliable information when you need it

The Archidata Solution integrates with existing management systems. It is a global solution that follows the life cycle of a building. Our platform offers a set of tools for three sectors of activities: assets, operations and projects. Many tools are offered to provide reliable information for all real estate activities.

THE ONGOING MANAGEMENT OF ASBESTOS INVENTORY

As part of the Equipment Management tool, the Ongoing Management of Asbestos Inventory shows areas affected by asbestos by floor and by room, in 2D and 3D. The information is kept up-to-date in a database that is used as a centralized online tool. Access to the database is restricted according to the security level given to users.
