

PLAN ROOM

A Collaborative, Archiving and Classification Tool

This high-performance tool classifies and allows the exchange of plans whether CAD or digitized. Plans can be classified by project, type of use, building or floor. Searching, consulting, visualizing, downloading, publishing, annotating or printing plans are done from a centralized database. It gives access to professionals involved such as architect, engineer, contractor.

Smart Property Management

Since 1995, Archidata offers a web solution for real estate managers. The plans archived on the Archidata platform are leveraged by extracting the information needed for space management and making it accessible rapidly and securely.

Reliable information when you need it

The Archidata Solution integrates with existing management systems. It is a global solution that follows the life cycle of a building. Our platform offers a set of tools for three sectors of activities: assets, operations and projects. Many tools are offered to provide reliable information for all real estate activities.

archidata.com

BENEFITS

- Saves time allocated to the search and distribution of plan
- Accesses the most recent plan securely and rapidly
- Decreases errors and saves time during construction
- Reduces cost for printing and distribution of full drawing sets during project modifications

LIFE AFTER YOUR PLAN ROOM

Once the plan room is complete, explore all the platform's functions for generating building data and managing portfolios, grouped into three categories of activities: assets, buildings and projects.
