

Facility Condition Assessments Based on Spaces and Building Element

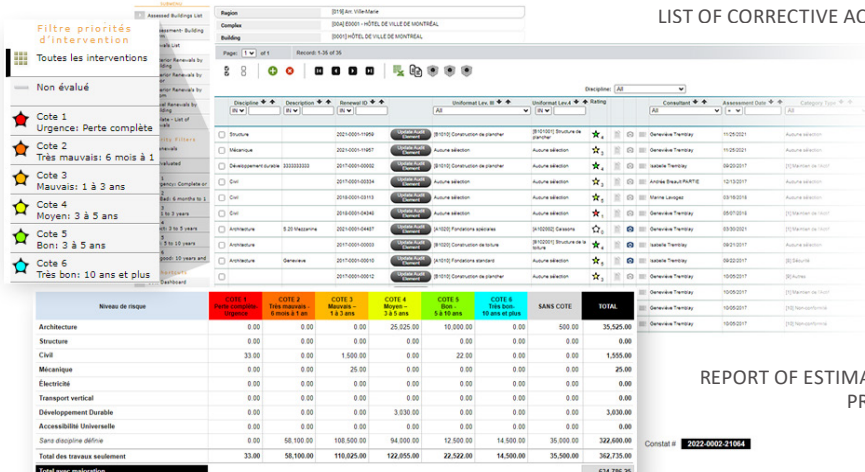

The Asset Assessment Module helps building owners to better plan capital projects and collect data to successfully manage the maintenance, renewal, replacement and compliance of their facilities.

Using an online survey to assess the condition of facilities and assets, the Asset Assessment Tool includes a diligent review of assets and a mosaic of photos to produce detailed reports. Equipment and assets are classified according to the Uniformat II standard.

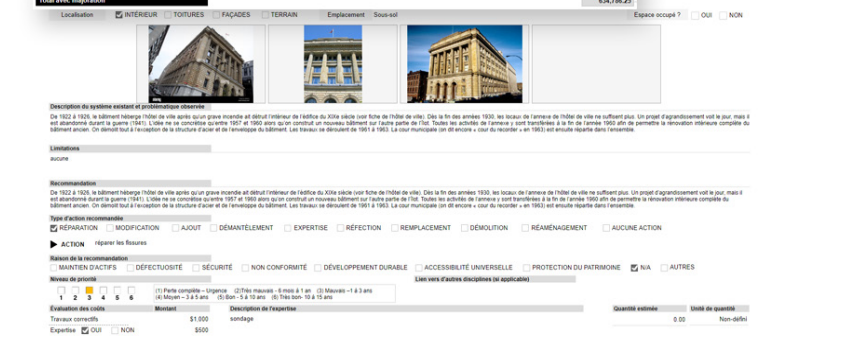

BENEFITS

- Corrective actions linked to spaces
- Time and money saving for coordinating work
- Assets expenditure data accessible on a single platform
- Better planning of capital expenditures
- Enhanced compliance with security standards and universal access

The Asset Assessment Tool automatically generates a summary report of projects and budgets for top management and a detailed report for managers. These reports include priorities and corrective actions to be undertaken, as well as cost estimates and recommendations.
